

The problems with stopping climate change

Since the early 2000s, a problem seemed to arise with rapidly changing climate and resulting catastrophes for mankind. Today we are within one of the biggest crisis ever. Global warming is happening fast and while everyone is talking about, why and how something must happen, many problems are not yet solved, or even discussed. Why does it pose such a big problem to fix global warming?

1. Please insert: bigger, smaller, as big as

The amount of CO₂ emitted by Landfills is _____ the emissions from air traffic.

The amount of CO₂ released to run our residual buildings _____ as the emission from road travel.

The emissions from building one car is _____ as the released CO₂ during construction of 4 metres of road.

2. Please check the correct boxes.

The problem with climate change is, that:

- ☐ The main problem splits in many different problems, that have to be solved.
- ☐ Many solutions are not straight forward and require extreme planning.
- ☐ The public interest is too low and nobody really cares.

3. What is the most prominent grey area in the fight against climate change?

4. Fill in the gaps with the words below. One word fits in no gap.

emissions, richer, connection, wealth, poverty

According to Kurzgesagt, there is a clear _____ between the _____ of a nation and it's _____. That means, that the _____ people are responsible for more emissions.

5. Using your knowledge from the previous task and the audio, discuss if it would suffice, if the rich people cut back on their lifestyle.
